NiallTunes Cracked Accounts is a small tool that plays.wav,.aiff,.flac,.ogg and.mp3 files It's sandboxed so you can play files without having to 'add them to your library' (a personal bugbear with Linux apps like rhythmbox and quod libet) NiallTunes Torrent Download can also store a list of folders if, like me, you store music by album, and it'll display album artwork if you've got it. Other than that it's pretty much like any other similar app. It plays.mp3, .ogg,.flac,.wav and.aiff files (though I have found some mp3s it won't play for some reason). Select the file you want to play. Press Ctrl+A to select all. Click on the 'copy' button in the top right hand corner. Paste the file in the 'Open with' box. Using Linux/Gnome/Unity Open a terminal window.
